This session discusses the requirements of the Americans with Disabilities Act (ADA) as they apply to the design and construction of road and bridge projects. The discussion includes the impact of these regulations on the responsibilities of transportation project managers & designers; construction project administrators, contractors & inspectors; and maintenance personnel. This course focuses on accessibility issues related to sidewalks, curb ramps, roadway crossings and detectable warnings. It covers state and federal accessibility requirements as published in ADA regulations, standards and guidelines, including the ADA Standards for Transportation Facilities and the proposed Public Rights of Way Accessibility Guidelines.
